(54) STORE AND FORWARD EXCHANGE SYSTEM FOR VIDEO SIGNAL AND VOICE SIGNAL USING VIDEO TELEPHONE

(57)Abstract:

PURPOSE: To perform the input instruction and transmission instruction of video signals and voice signals by simple operations.

CONSTITUTION: This system is composed of a means 20 for receiving the mixed signals of the video signals and the voice signals transmitted from a video telephone 1 through a line, the means 22 for separating the signals to the video signals and the voice signals, a storage means 24 for respectively recording the separated signals in prescribed places, a device 28 for sensing duplex tone multiple frequency(DTMF) signals originated from the line and a CPU 32 for retrieving the video signals and the voice signals stored in the storage means 24 based on the sensed DTMF signals, mixing them while synchronizing them and then transmitting them through a MODEM 21 to the video telephone of a user. The operation is instructed on an interactive basis by voice response from

the CPU 32 for the retrieval of the video signals and the voice signals based on the DTMF signals. Further, a transmission means transmits the requested video signals and voice signals to the video telephone of single or plural users instructed by the DTMF signals.

LEGAL STATUS

[Date of request for examination] 26.06.1996

[Date of sending the examiner's decision of rejection] 30.11.1999

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
